ABSTRACT

As part of its 6-year longitudinal study designed to assess the impact of Head Start, Educational Testing Service (ETS) has summarized and compiled tables of data collected on 16 of the 33 instruments administered to children in 1969 in three sites (St. Louis, Missouri; Trenton, New Jersey; and Portland, Oregon). Data from the parent interview and the child's medical examination is also included. The 806 tables are reproduced as computer printouts. Topics are: (1) Health Information, (2) Parent Interview, (3) Boy-Girl Identity Task, (4) Brown IDS Self-Concept Referents Test, (5) Cooperative Preschool Inventory (Caldwell), (6) ETS Enumeration Task I, (7) ETS Matched Pictures Language Comprehension Task I, (8) ETS Story Sequence Task, (9) Fixation Time, (10) Hess and Shipman Toy Sorting Task, (11) Johns Hopkins Perceptual Test, (12) Matching Familiar Figures Test, (13) Motor Inhibition Test, (14) Open Field Test, (15) Risk Taking Task 2, (16) Seguin Form Board, (17) Vigor. The narrative portion of this report (Volume 1) is PS 004 436. Other reports of the ETS study are ED 037 486, ED 043 391, and ED 043 397. (WV)

Introduction to Volume 2	
Health Information	1-19
Parent Interview	20-54
Boy-Girl Identity Task	55-158
Brown IDS Self-Concept Referents Test	159-174
Cooperative Preschool Inventory (Caldwell)	175-182
ETS Enumeration Task I	183-198
ETS Matched Pictures Language Comprehension Task I	199-254
ETS Story Sequence Task	255-262
Fixation Time	263-406
Hess and Shipman Toy Sorting Task	407-462
Johns Hopkins Perceptual Test	463-486
Matching Familiar Figures Test	487-534
Motor Inhibition Test	535-582
Open Field Test	583-686
Risk Taking Task 2	687-702
Seguin Form Board	703-758
Vigor	759-806

INTRODUCTION TO VOLUME 2

Volume 2 contains, for easy reference, tables of data summarized for the report. To handle these data easily and to prevent typographical errors we have reproduced the computer printout of the tables.

As noted in Chapter 3 of Volume 1, the primary analysis program computes and prints for each site (Trenton, St. Louis, and Portland) and across the three sites two factorially constructed tables comprising descriptive statistics on each instrument's derived scores. The first set of tables provides an analysis by age (at time of testing, using six three-month intervals, from 42-44 months to 57-59 months), by sex and by race (for black and white only, because of the paucity of data for other racial categories). The second set of tables classifies the data by preschool experience, by sex and by race. Preschool experience status is subdivided into three categories: known Head Start attendance (abbreviated in the tables as "H.S."); no known preschool status (abbreviated in the tables as "O"); and known preschool attendance other than attendance at Head Start (abbreviated as "P.S."). It is likely that many of the children in the "O" category have not attended Head Start or other preschool programs, but this category also includes children who have moved and enrolled in Head Start elsewhere. The tables cross-classify all subdivisions, with totals for each computed by collapsing the cells.

For each cell the information includes the number of observations (N); the mean; the standard deviation (S.D.); the minimum scores (MIN); the maximum scores (MAX); and the percentage of children responding (Percent Response) for each possible response category, as identified in the table headings. Percent Response is replaced by percentiles (10th, 25th, 50th, 75th, 90th) where continuous scores are used. The Percent Response option may provide a total cell count different from that used in computing the total mean,

since cases of testers' errors or children's refusals are included in this response total but not in the total mean. Where percentile intervals are computed, testers' errors and refusals are excluded from the total count, so that the total in the percentile cells agrees with the total count for the mean. Where percentiles are used and the number of observations was fewer than six, asterisks were inserted in the table rather than the number to prevent the reader's possible confusion or his misinterpretation of the percentiles.

The Child Health Record and the Parent Interview are reproduced as appendices to Volume 1 of this report. The statistics for these measures are presented somewhat differently from those of the other instruments. Distributions consisting of the number of responses and the percentage of the population responding to each item are categorized across the three sites, within each site, by sex, and by preschool experience. ("Other" indicates that, according to present information, the child has not attended a preschool program.) For items considered to be continuous, there are separate frequency distributions using the same categories. In addition, the mean, standard deviation, minimum and maximum values, sum of scores, sum of squared scores, "percent below" values, and an analysis of variance table are provided. The chi-square statistic, provided for all items where there were several response alternatives, is flagged with "NV" (indicating that the statistic may not be valid) whenever a predicted cell size was less than five.

Marginals have been deliberately excluded from the tables because of the confounding of the variables (a point discussed in Vol. 1, Chapter 2). As stressed throughout the report, these tables are but the first in a series of planned analyses. Until further information is obtained on intra- and inter-relationships of these measures, interpretations of results should be considered highly tentative.
